

# What Kind of Speakers Should I Buy for My FlexRadio SDR?

**Content provided by:** FlexRadio Systems Engineering

## Answer:

You want to buy the highest quality powered computer speakers you can afford. This will be in the \$30-100 price range. You have purchased a "hot rod" of a receiver; don't skimp on the "tires".

You need to buy a high quality pair of "powered" computer speakers that will match the quality of the sound produced by your FlexRadio transceiver

In addition, these higher-end speakers are usually a lot less susceptible to RFI.

The following brands have been used successfully with the FlexRadio Systems software defined radios

- Klipsch Pro Media Ultra 2
- Bose Media Mates
- Bose Companion 2
- Harmon Kardon
- Altec Lansing 221
- Creative Labs Model 34
- Creative T20 Series II
